

2+ — Epic, User Stories & Design Brief

Product design overview · exported from Confluence (v4, July 9, 2026) · Trevor Spencer

1. Product Concept

Working name: 2+ — from the New Testament principle the whole product is built on: *"Wherever two or more are in agreement as to something on this earth, the Father will work to make it happen."*

The problem: Goal setting and manifestation are isolating. People carry big visions for their lives and often feel like they are the only ones in agreement with them. There is no structured, third-dimensional place where others can validate and affirm your vision — and no system that keeps you in the right mindset about it on a continual basis, in a world full of forces pulling attention toward things that make people feel less than their higher self.

The product: A mobile app (phone-first) exclusively for your affirmations, motivation, alignment, and higher-mind manifestations. 2+ captures your goals and vision through an AI-guided conversational intake, uses AI to rewrite them as present-tense "I am" statements, delivers them back daily as text, audio, photo-realistic images, and AI-generated "mind movies," and layers on a community and professional coaches who stand in agreement with your vision.

Guiding design principle — three expressions of "two or more in agreement": (1) the **AI** itself, as an intelligent second entity that affirms, encourages, and conditions the user's conscious and subconscious mind; (2) the **social community** of friends and followers agreeing with your affirmations; (3) **verified coaches** who professionally hold and strengthen your vision. Every major feature maps to one of these three.

2. User Epic

As a person working toward a vision for my life, I want a dedicated platform where I can capture my goals and the why behind them, have them transformed into powerfully worded affirmations delivered to me daily as text, audio, images, and video, and have other people and coaches stand in agreement with them, **so that** I stay in my highest mindset on a continual basis and am never isolated in pursuing my manifestations.

3. User Stories

MVP — Affirmation Schedule App (v1)

Goal & Vision Capture (Onboarding)

- **US-1 — Conversational AI intake:** As a new user, I detail out my goals and vision through an AI-driven conversational onboarding — either a simple question-after-question interface or a free-flowing chat conversation — where the AI is designed to ask the right questions to get me to fully open up, so the app captures the complete picture of what I want to experience and accomplish, and the why behind it.

- **US-2 — AI "I am" statement engine:** As a user, my want-based goal statements are automatically rewritten as succinct, present-tense, identity-based "I am" statements with no separation or lack between me and the goal (e.g., "I want a seven-figure income from my business" → "I run a profitable business that gives me a seven-figure income"), so my brain is programmed toward the goal, not the gap.
- **US-3 — Identity statements:** As a user, the app generates well-written statements of who I am and the type of person I need to be to vibrate at the level of my goals — including eternal, timeless statements ("I am positive, I am happy, I am loved, I am one with God") — so I can see and read myself that way daily.
- **US-15 — Life-area coverage:** As a new user, the intake explores my goals across the areas of my life — spiritual, financial, relationships, family, social, fitness/health, business — so my affirmation set reflects my whole vision, not one silo.
- **US-16 — Starter action items:** As a user, the intake connects each goal to a few starter action items or big overarching objectives — *not* a full generated plan (2+ is not a fitness-plan or project-planning app) — so my manifestations are linked to real first steps.

Affirmation Formats

- **US-4 — Text:** As a user, I can read my affirmations, goal statements, and identity statements as beautifully formatted text (readable in about 60 seconds).
- **US-5 — Audio:** As a user, I can listen to my affirmations as a ~30–60 second audio track read by an AI coach voice *or recorded in my own voice*, so I can prime my subconscious on a scheduled cadence and repeat them out loud as I listen.
- **US-17 — AI goal images:** As a user, AI generates a photo-realistic image for each of my "I am" statements — optionally personalized by feeding my profile photo through the AI (e.g., an image of me checking a seven-figure bank balance, or dropping my kids off at school) — so my brain sees the reality while I read and hear it.
- **US-6 — Mind movie:** As a user, AI composes my goal images into a 30–60 second photo-realistic video with my "I am" audio track overlaid — a "mind movie" (per the practice taught by coaches like Dr. Joe Dispenza) — that I replay on schedule so my brain rehearses and experiences the vision all day.

Profile & Paywall

- **US-18 — Subscription paywall:** As a new user, after completing onboarding I pass through a subscription paywall before my affirmation content is unlocked into my profile.
- **US-19 — Personal affirmation feed (profile):** As a user, all my intake data and generated content lands on my profile page — my own personal affirmation feed — where I can access it any time off-schedule and edit, tweak, or update any affirmation whenever I want.

Daily Delivery & Scheduling

- **US-7 — Flexible scheduled cadence:** As a user, I set how often my affirmations come through — once a day at noon, hourly, up to ~12 times a day — or accept best-practice recommended cadences (e.g., 10x/day for the first two weeks, then 5x/day, settling at a steady 3x/day; or 6x/day at ~60 seconds = just six minutes a day), backed by data-based encouragement about how much more likely I am to stay in that identity and realize the outcomes.
- **US-8 — Quick-play from notification:** As a user, push notifications are designed to be easy and non-annoying — I can read the text, listen to the audio, view the images, or watch the mind movie in ~60 seconds directly from the notification, then it moves away.

Tracking & Gamification

- **US-9 — Affirmation rings & stats:** As a user, my profile includes a gamified stats section — closing my "affirmation rings," streaks, medals, and awards, with daily/weekly summaries of how often I read, spoke, listened to, or watched my affirmations (in the spirit of Streaks, Habits, and MyFitnessPal) — so conditioning my mind becomes a daily habit.
- **US-20 — Encouraging reinforcement:** As a user, stats and end-of-day notifications are always encouraging, never condemning ("Great job — you experienced your affirmations 4 out of 5 times today. Way to tune into this reality."), so the feedback loop itself keeps me in a positive state.

Phase 2 — Social & Community

- **US-10 — Affirm others:** Other people on the platform can affirm and agree with my manifestations — the core "two or more in agreement" mechanic — so my vision is validated in a structured community.
- **US-11 — Privacy toggles:** Visibility toggles to private or public at the profile level *and* at the individual-affirmation level (including my mind movie), so I share exactly what I'm comfortable sharing.
- **US-21 — Friends & discovery:** Add friends, invite friends, and discover people around me with public profiles. (Open decision: follow/follow-back vs. two-way mutual connections.)
- **US-22 — Social feed:** The feed shows two kinds of events from connections: *creations/edits* ("So-and-so created a new affirmation") and *experiences* ("Trevor just watched his mind movie"), so agreement happens around both the vision and the daily practice.
- **US-23 — Positive-only interactions:** Likes and comments only ("Dude, right on — super proud"), no dislikes, safeguards against negative comments (moderation TBD).
- **US-12 — Community for goal setting:** A social community for goal setting, creating visions for my life, and accountability, so the isolation around my goals disappears.

Phase 3 — Coaching Marketplace

- **US-13 — Coach marketplace:** Browse a marketplace of *verified* manifestation coaches, life coaches, and mentors who truly believe in my vision.
- **US-24 — Coach accounts & rates:** Coaches set up verified accounts, set their own rates, and offer standardized-but-flexible service agreements (e.g., "for this rate I will review your mind movies on this cadence and comment/chat").
- **US-25 — In-app coaching sessions:** Live calls with my coach through the app and chat via DM — the whole coaching relationship lives where my affirmations live.
- **US-14 — Coach-led visualization:** My coach reviews, guides, and affirms my visualizations and mind movies — modeled on how Adonis works with clients today: knowing their goals deeply, meditating on their mind movie daily, and feeding that vision with love, gratitude, joy, and abundance on their behalf.

Backlog / Open Questions

- **Follow model:** follow/follow-back vs. mutual two-way connections for the social graph.
- **Comment safety:** how to guarantee positive-only interactions (no dislikes; negative-comment handling).
- **Action-item tracking:** starter action items live in intake (US-16); ongoing tracking is still open.
- **Coach partnership:** Adonis (Trevor's manifestation coach) as a potential launch partner / advisor.
- **Cadence science:** pull the research behind repetition-and-identity claims to back the scheduling recommendations.

4. Product Roadmap

- **v1 — MVP:** Affirmation schedule app: conversational AI intake across life areas → "I am" statement engine → text / audio / images / mind-movie formats → subscription paywall → profile affirmation feed → flexible scheduled notifications with quick-play → rings, streaks & encouraging stats.
- **v2 — Social:** Friends/invites/discovery, privacy toggles, social feed of creations and experiences, positive-only likes and comments.
- **v3 — Coaching:** Verified coach marketplace: coach accounts, self-set rates, service agreements, mind-movie review, live calls, and DMS.

5. Feature Concepts & Notes

- **The "language of manifestation" engine is the signature feature:** most people write goals in a way that linguistically programs separation and lack. Auto-translating user input into succinct, present-tense "I am" statements is the core differentiator.
- **AI/LLM feasibility (researched):** API calls to a public model for a nominal per-call fee keep the app lightweight; open-source (e.g., Llama) self-hosting is a cost-efficiency option. Need models for conversational intake, "I am" reformatting, audio, image, and video generation.
- **AI as the first "agreement":** the AI is an intelligent second entity that affirms, encourages, and conditions the user's mind — the first of the three ways the app fulfills the two-or-more principle (AI → community → coaches).
- **Personalized imagery:** feeding the user's profile photo through image generation makes goal images literally show *them* living the outcome.
- **Mind movies are a proven coaching practice** (Dr. Joe Dispenza): the app productizes the reframe — the vision isn't on a notepad or in a camera roll; it's in an intelligent app that brings it to you.
- **Scope guardrail:** 2+ is not a plan-generator — just goals, the language and media of the goals, and light starter action items.
- **Market validation (July 9, 2026, Google Ads Keyword Planner):** "daily affirmations" pulls 100K–1M monthly US searches (high competition); "mind movie" (1K–10K, low competition) is an ownable wedge term; app-intent terms are low-volume/low-competition — ASO likely matters more than SEO. Full data: Market Validation.md.

6. Design Instructions for Claude Design

Platform & feel: Mobile app. Calm, uplifting, premium — a sanctuary from the doom-scroll, not another feed. Daily-ritual energy. Notifications feel light and inviting, never nagging.

6a. Branding & Color Direction — “Golden hour 2.0” (decided July 9, 2026)

A warm dawn-toned canvas (hope, new day, daily ritual) sharpened with high-contrast ink and a reserved cool accent so the app reads *intelligent instrument*, not journal.

	Hex	Role	Usage rules
	#FAF4E8	Cream canvas	Default screen background. Warmth, morning-ritual feel.
	#26201A	Ink	Primary text, structure, streak pill, mind-movie “theater” card. High contrast = precision.
	#E9B84C	Gold	Achievement & warmth only: streaks, medals, weekly bars, mind-movie icon.
	#157A6E	Teal — AI only	Reserved exclusively for things the AI did or tracks: play button, waveform, progress fills, AI chips. Never decorative.
	#DFF0ED	AI tint	Background for AI badges/chips (“Rewritten as I am”) with dark teal text #0E5A50.
	#8A7A66	Warm gray	Secondary text, labels, timestamps.
	#E8DEC9	Border / inactive	Card borders, dividers, empty progress. Also #D9CBB0, #B5A88F for inactive elements.
	#FFFFFF	Card white	Content cards on the cream canvas.

Five “intelligent app” design principles

- **Add ink:** near-black espresso ink for text and key structural blocks. High contrast reads “system”; low-contrast all-warm reads “stationery.”
- **Give the AI its own color:** one cool accent (teal) reserved exclusively for AI moments inside an otherwise warm palette — a visible second presence, literally the two-or-more story in the UI.
- **Show the work:** copy that surfaces what the AI made from what the user said — “Rewritten as I am” chips, “New scene generated from goal 3.” Journals hold what you wrote; 2+ shows what it built.
- **Quantify with type:** monospace for numbers and timestamps; micro-charts (ring segments, weekly bars) in stat cards.
- **Structure the audio:** waveform visualization instead of a plain progress bar — the “generated media” cue.

Typography: serif italic for the affirmation voice (human/spiritual register), clean sans for UI chrome, monospace for numbers and timestamps.

Hard rule: no harsh red anywhere in the system — gamification is “encouraging, never condemning” (US-20). Errors use the warm gray + ink register, not alarm red.

Alternate direction (backup): “Two in agreement” — violet #5B4BC4 / #8E7BE0 (spirit, higher mind) meeting gold #C9A05F / #E9B84C (abundance) on cream #FBF7EF, with the violet-to-gold gradient living in the

wordmark — two hues literally in agreement. Parked: “Higher mind” (deep indigo + gold) and “Sanctuary” (sage + gold). Coral/peach reserved as a possible v2 social accent.

6b. Screens to lay out (v1)

- **Sign up / Log in** — standard mobile auth.
- **Conversational onboarding** — AI chat / question-after-question intake across life areas, capturing goals, the why, and starter action items. Voice-first input.
- **Affirmation review** — AI-rewritten “I am” statements presented one at a time for confirm/reword/edit (want-language → identity-language staged as a reveal).
- **Scheduling setup** — cadence picker led by a recommended best-practice plan, with data-backed encouragement.
- **Paywall** — subscription gate at the end of onboarding; gates audio, images, mind movie, and scheduled delivery.
- **Home / daily ritual** — greeting + streak pill, affirmation card with AI chip and waveform player, mind-movie theater card, rings + weekly stat cards. (Reference mockup below.)
- **Profile / personal affirmation feed** — all generated content; edit anytime.
- **Player** — audio and mind-movie playback (30–60s), goal-image viewing.
- **Progress / rings dashboard** — rings, streaks, medals, encouraging stats.
- **Notification quick-play** — read / listen / view / watch straight from the notification.

Later-phase screens (v2/v3): social feed, friends & discovery, coach marketplace, coach profile with rates/services, in-app live call and DM.

Open design items: logo/wordmark, wireframes, Mobbin inspiration references, dark mode (ink canvas variant), app icon.

Companion document: “First-Run Experience.md” — full written walkthrough from first open through onboarding, paywall, and home screen, including copy examples and emotional arc.

7. Reference Mockups (Golden hour 2.0)

Conversational intake — voice-first AI interview, life-area progress, quick-reply chips

Affirmation review — the “want → I am” reveal with keep / reword / edit

Home / daily ritual — affirmation player, mind-movie theater, rings & stats

Palette roles in context: cream canvas, ink structure, teal reserved for AI moments (avatar, mic, player, waveform, chips), gold for achievement (streaks, progress, weekly bars), serif for the affirmation voice, mono for numbers. Editable SVG + PNG files for all three screens live in the 2+ project folder; the home-screen PNG is also attached to the Confluence page.

Appendix note: the raw source voice notes (July 3 and July 9, 2026, verbatim) live on the Confluence page “2+” (section 8) and in Notion, and are omitted here for focus. Sources: Notion voice notes “Mobile app idea for affirmations, manifestations, and social accountability coaching” and “Two-or-more app: AI-driven affirmations, mind movies, social feed, coach marketplace.”
